

GALVANIZED STEEL DETECTABLE WARNINGS & DIRECTIONAL GUIDANCE

Tactile walking surface indicators (detectable warnings and directional guidance) facilitate movement through “comfort zones” and across shared streets.

TufTile Powder Coating State-Of-The-Art Protection

TufTile’s in-house powder coating system and materials were designed specifically for detectable warning and directional guidance products. Six wash and rinse stages remove contaminants and prepare the metallic surface for powder coating. A clear primer coating is applied to the clean surface, which seals and enables top coat bonding. The durable color top coat is bonded to the metallic surface ensuring chip and flake resistance, long-term adhesion, and durability. Visit the “Videos” gallery on our website for full details.
